A Simple Class Diagram

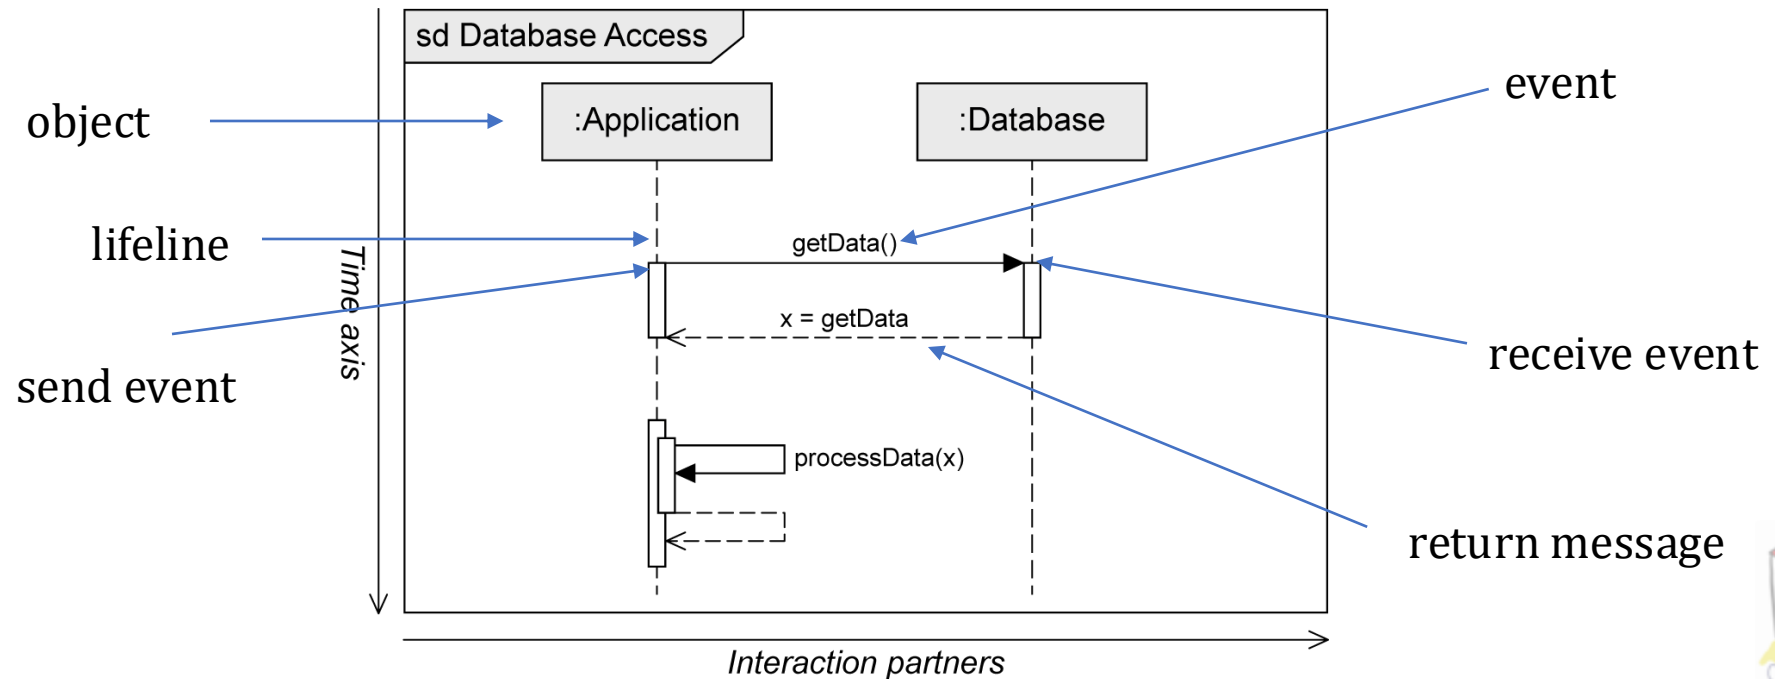

Modeling the Dynamic Aspects: Sequence Diagram [Interaction Diagram]

What about the interaction?

Sequence Diagram

- Captures the dynamic behavior
- Two dimensional-diagram
 - Horizontal: Involved interaction
 - Vertical: Chronological order of the interaction
- Interaction => sequence of event specifications

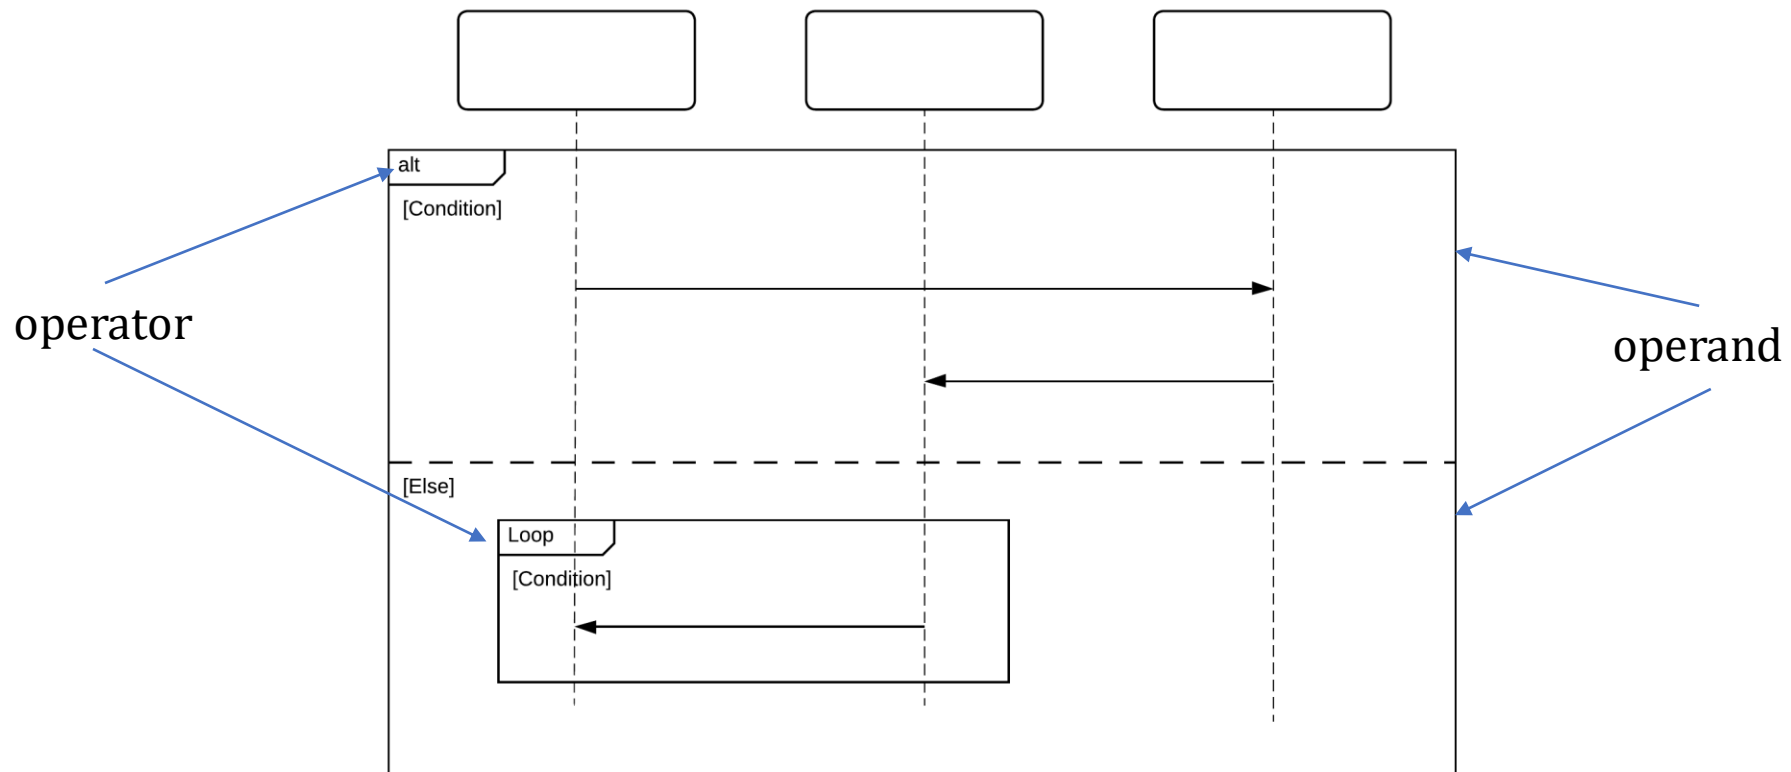

Sequence Diagram – Main Message types

- Synchronous Message
 - Sender waits till the return message is received before next
- Asynchronous Messages
 - Sender does not wait for response message
- Response message
 - Not mandatory in obvious situations

Sequence Diagram – Combined Fragments

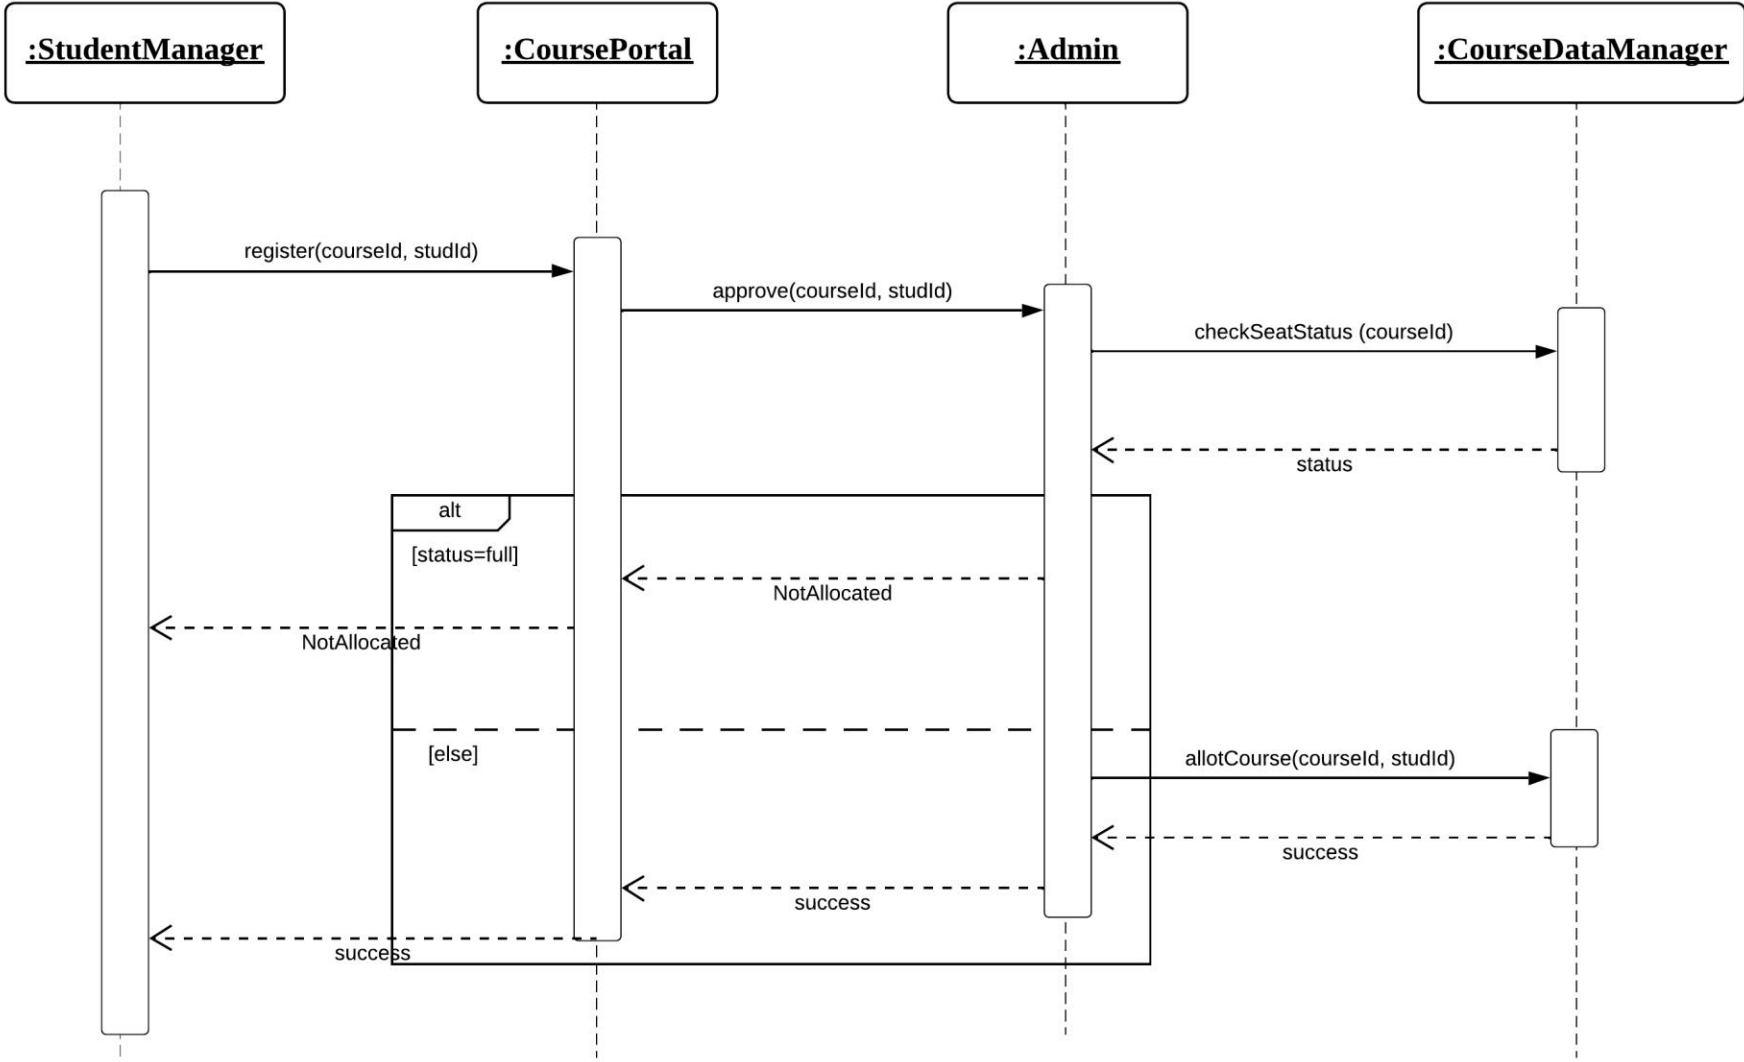

- Model control structures explicitly
- UML sequence diagram supports 12 operators. Three groups
 - Branches and loops, Concurrency and order, Filters and Assertions

Different Operators

| Name and Operator | Use |
|---------------------|---|
| Alternative (alt) | Express alternative execution (if-else) |
| Optional (opt) | Fragment executes based on guard condition (if) |
| Break (break) | Execution of a fragment when break condition is met |
| Loop (loop) | Repeated execution of a fragment |
| Sequential (seq) | Weak ordering (default model) |
| Strict (strict) | Interaction with strict order |
| Parallel (par) | Concurrent execution of sub-scenarios |
| Critical (critical) | Atomic interactions (no other interactions can affect) |
| Ignore (ignore) | Irrelevant messages (insignificant messages at runtime) |
| Consider (consider) | Important messages of the interactions |
| Negate (neg) | Model invalid interactions, undesirable situations |
| Assert (assert) | To assert certain interactions (mandatory) |

Sequence Diagram - Example

Time for an activity

Lets create the interaction diagram for the course management system. Expand your modeling with the interaction aspects. You are free to revisit/modify your class diagram

Thank You
